Quick Scan for TU/e students at organizations

Are you looking for ways to improve your business? Ever considered working together with bachelor’s students Industrial Engineering of the Eindhoven University of Technology (TU/e) to make a Quick Scan of your business? Please, read further.

What does a Quick Scan offer your company?
A Quick Scan is typically done by students in the third year of their bachelor’s program. The objective of the Quick Scan is to describe the business processes within your company from different points of view, including business economics, information systems, operations management, work and organizational psychology and new product development and marketing. For your company, this means a comprehensive view on the current state of how you run your business. The Quick Scan can be the basis for follow-up bachelor’s and master’s projects.

What do we expect from your company?
Each student is supervised by a university staff member and a company supervisor, where the company supervisor:
• is the contact person for the student within the company
• introduces the student into the company
• takes care that the student has a place to work
• takes care that the student can access all data he/she needs for the project
• has meetings with the student to discuss about the project and the progress he/she makes
• reads the reports of the student
• is present when the student presents her/his findings at the company
• gives his/her input to the university supervisor on the way the student did the internship. This concerns the way the student collaborated with the people in the organization, the way the student organized his/her work, his/her communication skills, the level of independency.

Where innovation starts
Project duration
A student has 280 hours available for executing the project with a throughput time of about 10 weeks, meaning about 3 full days per week that a student can spend on the project. This time is spent in your company and/or at TU/e, depending on the type of project.

Costs for company
Apart from the hours spent on supervising, no further costs are involved.

Combination Quick Scan and bachelor's project
For students it is possible to do their Quick Scan and their bachelor's project in the same company. This has the following advantages for your company:

- the Quick Scan is a good way for the student to become acquainted with your company before starting a bachelor's project
- the Quick Scan gives your company a broad, multi-disciplinary view of the organization and the business processes. This is a perfect way to discover problems or research questions in the business processes, which can be an excellent subject to analyse in depth in the bachelor's project.
